Harriman's Health Ceases to Cause Panic in the Market.

HAS ITS EFFECT

General Situation Regarded as Very Favorable by Operators.

NEW YORK, September 5.—When business began in the stock market last week evidence had been accumulating over Sunday which served to dissipate the principal anxieties which had been keeping the market unsettled and excited. More exact information of E. H. Harriman's state of nealth quieted the hysterical alarm on that subject which has been felt ever financier had retired on his return from abroad and the entire reticence cherved by all having knowledge of his real condition. A personal statement from Mr. Harriman himself late on Monday confirmed the more rational impression of his health, and the subject thereafter dropped almost into obscurity and did not figure more than casually in stock market consideration. This retirement of the subject trom prominent consideration by no means ended its influence as a factor on prices, as there was a residue of uncovered short sales of stocks based on the expected ill effects of the declining strength of the president of the Union Pacific and the interruption to be caused to the vast financial projects which he is supposed to be pursuing. The short interest in the market was a substantial influence throughout the week, even after the urgent and almost panicky buying for that account at the opening of the week. The approach of a holiday interval of three days at the end of the week. The approach of a holiday interval of three days at the end of the week. The approach of a holiday interval of three days at the end of the week intensified the disposition to close up speculative contracts and increased the demand from the short interest.

Way Opened Up.

With the clearing away of the anxieties caused by Mr. Harriman's illness, the way was opened for resumption of influence by the very favorable factors in the general situation. Of these primary importance was accorded the iron and steel trade situation. As was seen by the aggressive leadership of United States Steel in the recovery of prices. This was sufficient to place the price of that stock at a new record level. Trade advices all pointed to the expanding demand for iron and the extraordinary activity in all lines of furnished steel products. Various trade and financial authorities gave extremely sanguine estimates of the production next year.

The influence of the steel trade advices was not supplemented effectually from the cooper trade, owing principally to the statistical position of that metal. Resales of copper metal and a further a his real condition. A personal statement from Mr. Harriman himself late

difficulty in sustaining the price for the metal.

Causes For Anxiety.

The agricultural prospect suggested some causes for anxiety. The government report of the cotton condition showed so heavy a deterioration as to bring it to a percentage lower than the series of the compensating influence of the enlarged acreage for full allowance for the compensating influence of the enlarged acreage for the crop and the heavy reserves implied by the showing of last years sunprecedented crop to mitigate the bad effect of this showing. The lack of moisture for the corn crop and the conviction that it was going back had also to be faced. Some warning notes were heard also from sources which command respect in the financial community of a danger of over-estimates of the wheat crop itseli.

The money market is subject to close scrutiny, owing to the known factors at work there to affect the future, but the actual effect op rates has not been sufficient year to become an active influence in the speculation. The interior is drawing funds from New York for seasonable use. The prospect of government borrowing at an early date becomes clearly defined. Several large 5.

Wonder Is That Drop in Wheat Was Not Far Greater.

points were fairly heavy early in the week, but afterwards they diminished, and meanwhile sales of flour were larger, while shipments of wheat into week, but afterward and meanwhile sales of flour larger, while shipments of wheat into consumptive channels were bigger than expected. Moreover, similar conditions existed in winter wheat markets, the shipments in most cases being targer than the receipts, and hence it was plainly evident that there was alm chance of any important increases in the visible supply in the near future. The downward drift was also partity attributed to the discouraging tenor of cable advices, prices having declined in most European markets, but notably in Berlin and Liverpoot.

The rapid break in Berlin was larges to be paid for new stocks. The local jobbers had a good week, a special sale of dress broadcloths resulting in a distribution of \$125,000 worth of fall fabrics.

Halsa. The cash market was dull, dered to New Greans of the purpose protects have few orders for new Cotton Market's Week. The feature of the week in cotton of the government report on the condition of cotton. That he report made of great the condition of cotton. That he report made of great the cotton of great sees of what the attachment would show was several points above the actual nding. The report made the second of the was condition of 11.5 last month, 76.1 a year. The imprecedanted low condition was the result of a loss of 10 points in the condition was the result of a loss of 10 points in the condition of the second with an improvement of 2 points, was the condition of the report. The was condition of the report made and 23 in in T. The second not severe and points above were awarded the condition of the report made and 23 in in T. The new actual interest and anxiety at home and an arroad than any other report recently was provided to the report of the week of nurses and the report of the report made and the report of the report made and the report of the report of the report of the report of the week of nurses and the report of the rep

still, in the main, helpful to the bulls. There has been but little rath, most of it being simply a trace, and there has not been enough precipitation to relieve the dangers of dry weather, and the predictions for the balance of the week were for generally fair weather. But over against the crop pessimism aroused by the unfavorable crop conditions is the evident determination of powerful and controlling interests to hold the market down. Even the South now and then gives evidence of a willingness to sell new cotton.

The Bureau Report.

SHIPMENTS ARE HEAVY

Government Report Shows Low Condition of Cotton Throughout South.

NEW YORK, September 5.—Domestic wheat markets ruled weak early 11 the week, but in the opinion of many experienced and conservative dealers the decline was rather inconsequential, all things considered. There appeared to be such a preponderance of bearish influences that a much greater decline might easily have occurred. With almost all the market news and statistics favoring the bear element, it was apparent that large professional operators and big prospective buyers would meet with little opposition during their manoeuvres to depress values, but new ertheless there seemed to be no great depression.

Receiton.

The Bureau Report.

A point that may escape the attention of cotton traders is the effect or the unexpectedly low condition of cotton or the cotton goods market.

Merchants have been disposed to give warnings by mill agents that prices for cotton goods would probably move upward. The report, however, has more than confirmed mill owners in their desire for higher prices for their ostion production of the minds of some large merchant in the places of orders would get them in at lower prices.

As matters now stand, some of the mediate or nearby needs, bur many samil mills are confronted by the necessity of curtailing production until merchants see their way clear to make the buying lifelits. At the moment buyers are naming prices that are below' a parity of 12.70 for spot cotton.

Prices Are Steadled.

Prices Are Steadled.

NEW YORK, September 5.—The net result of the publications of an unexpectedly low government crop report on the market for cotton goods and yarns was a steadying of prices and a noticeable increase in the desire of large operators to close all pending deals for goods to be delivered on contract.

Emporia Man Takes Own Life in Fit of Despondency.

[Special to The Times-Dispatch.]

[SMPORIA, VA., September 5.—W. A. Arrington, a railroad man of North Emporia, fired a pistol ball into his brain this afternoon at 5 o'clock and died in a few minutes. Mr. Arrington had been in the employ of the Emporia Manufacturing Company for a number of years as its log-train conductor, but four weeks ago resigned this position. Yesterday afternoon he announced to a number of friends here that he had secured a position with the Norfolk and Southern at New Bern, N. C., and would leave for that place to-morrow.

Mr. Arrington was alone in his home.
